

Welcome to the 4th Digital Newsletter of the Co.De. Project

Co-Design Learning for the School of the Future – Co.De. Project

About the Project

The Co.De. project is dedicated to tackling early school leaving by equipping teachers with innovative digital tools and co-design methodologies for classroom learning. By integrating interactive e-learning resources and collaborative practices, Co.De. supports both teachers and students in shaping more inclusive and engaging learning environments.

Highlights from the Transnational Project Meeting in Aveiro, Portugal

On 2–3 July 2025, the Co.De. Consortium met at Agrupamento de Escolas José Estêvão in Aveiro, Portugal, to take stock of progress and plan the next phases of the project. Partners reviewed the pilot phase of the Learning Snacks and discussed their refinement and translation into partner languages. Work on the Moodle-based Co.De. Toolkit was also advanced, with agreement on the structure of the training modules and on the integration of certification and tracking features by Budakov Films.

The meeting further addressed dissemination efforts, setting targets to increase online visibility and preparing for national events and the final conference in Brussels. Coordination matters, reporting obligations, and upcoming deadlines were also reviewed. The gathering concluded with a social dinner, which provided an opportunity for partners to strengthen cooperation and exchange ideas in a more informal setting.

September Online Meeting – Updates and Next Steps

On 25 September 2025, the partners gathered online to align on ongoing activities. The discussion addressed quality assurance, pending translations and uploads of the Learning Snacks, and the collection of piloting responses, which are close to completion. Updates on the Moodle platform were shared, and partners were asked to complete its validation while finalising their learning content.

The meeting closed with agreement on immediate tasks and confirmation of the next Steering Committee session on 30 October 2025, ensuring the smooth continuation of the project.

Learning Snacks - Freely available now!

By making these resources freely available online, the consortium ensures that educators can experiment with new approaches immediately, while building confidence in applying co-design methods in the classroom. This set of tools marks a concrete step towards the project's goal of equipping teachers with practical, modern strategies for tackling early school leaving and fostering more inclusive learning environments.

Learning Snacks – Now Available Online

One of the major achievements of the Co.De. project to date is the finalisation and publication of the Learning Snacks. These short, interactive training modules have been designed to introduce teachers to co-design methodologies in a concise and engaging way. Covering topics such as effective communication in co-design environments, the use of formative assessment, and the adoption of innovative teaching methodologies, each Learning Snack combines clear guidance with visual resources and practical tools.

The materials are now available in multiple formats: infographics that summarise key principles at a glance, and short videos hosted on the project's official [YouTube channel](#), offering dynamic and accessible learning content for teachers across Europe. For example, teachers can explore how to apply formative assessment techniques to support students' progress, or how to integrate co-design and innovation in their daily practice.

Progress on the Moodle Platform and Training Content

A major focus of the consortium at this stage is the preparation of the Moodle-based Co.De. Toolkit, which will serve as a central hub for teachers and students to access co-design learning resources. Each partner is finalising training content, which will be organised into structured modules with interactive activities and assessments.

The platform itself is being developed by Budakov Films, who is ensuring the integration of certification, progress tracking, and user-friendly navigation. All content is expected to be uploaded by the end of 2025, paving the way for piloting with teachers and students in spring 2026.

What's Next?

- ✓ Preparation of the training content
- ✓ Uploading of the training content to Moodle and platform validation
- ✓ Preparation of dissemination reports and outreach campaigns
- ✓ Planning for piloting activities in 2026
